**DETAILED ACTION**

***Response to Amendment***

The following is in response to the amendment filed May 13, 2009.

***Allowable Subject Matter***

Claims 43-46, 48, 49, 52-76, and 78-82 are allowed.

The following is an examiner's statement of reasons for allowance:

In a machine for manufacturing a fiber material web comprising a forming region with circulating inner dewatering belt, a pressing zone with a suction element, and an additional dewatering belt guided around the suction element, the prior art does not disclose or suggest arranging the web, inner belt, suction element, and additional dewatering belt so that the web is between the inner belt and the additional dewatering belt as the additional dewatering belt is guided about the suction element, and further providing within the loop of the additional dewatering belt at least one of a tensioned belt around the element or a suction roll opposite the element.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

***Response to Arguments***

Applicant's arguments filed May 13, 2009 have been considered.

In view of the arguments and amendment to the claims, Applicant has overcome the rejection under 35 U.S.C. 112, second paragraph, and each of the prior art rejections under 35 U.S.C. 102(b) over Schiel (US 6,004,429), Turunen (US 4,144,124), and Herman (US 2003/0136018). None of these references teach or suggest the combination of an inner belt and a pressing zone combined with a suction system, including a suction element, additional dewatering belt, and a tensioned belt or suction roll within the loop of the additional dewatering belt, all arranged as claimed. Turunen represents the closest prior art as it discloses a machine for manufacturing tissue paper including an inner wire, a press section which includes a suction press roll, a second press nip between the suction press roll and a Yankee drying cylinder, an endless felt looping about the suction press roll, and an embossing fabric looped about the endless felt and suction press roll. The looped felt and embossing fabric differ from the claimed additional dewatering belt and tensioned belt, but even if they were equivalent, the web in Turunen is not guided with the inner wire about the suction roll.
